Increasing Efficiency In the Collision repair Shop

A well organized workplace leads to effective work process for a **bodyworx** professional. Unfortunately, what sounds logical in theory is not yet common practice in many #autobody shops.

In some collision repair shops, chaotic conditions are the order of the day with materials and tools lying around. Time is lost or wrong materials are used which can lead to avoidable mistakes. Keeping things moving is critical not only to the shop but to it's customers.

COOPERATION AS A CUSTOMER BENEFIT

Through the cooperation between a leading manufacturer of abrasives such as 3M and a manufacturer of organization systems such as Festool Automotive systems benefits collision repair facilities in terms of organization and efficiency. And that begins with the optimized design of the workplace.

A system like the Total Automotive Sanding System can be adapted to the individual needs of the collision repair technician, which is particularly suitable for areas such as for paint prep, where the space available does not permit the use of larger trolleys, and various kinds of abrasives.

INCREASED OPERATIONAL EFFICIENCY

A Total Automotive Sanding System offers repair shops a unique, organized workplace solution for vehicle repairs. The combination of a well thought out organizing system, highly efficient abrasives, high-performance machines coupled with technician expertise leads to an increase in efficiency.
